DETAILED ACTION

Acknowledgment is made of the receipt of the amendment received on 7/14/03. Claims 20-39 are currently pending.

Drawings

1. Figures 1a, 1b, 1c, 1d, and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 20-39 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The examiner can find no support for a 'regular grid' as cited in the claims. The examiner notes that the 'regular grid' as cited in the claims is deemed a 'rectangular grid' throughout the body of the specifications.

Allowable Subject Matter

4. Claims 20-39 are allowable over prior art.

Art Unit: 2876

5. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fails to teach, or fairly suggest either alone or in combination thereof, a method of correcting distortion of a deformed image derived from reading an optical code, generating a grid of the deformed image to identify a plurality of characteristic points in the deformed image, each of the characteristic points corresponding to one of the notable points; and generating on the rectangular grid an undistorted image by means of a geometrical transformation correlating the characteristic points and the notable points. In contrast, the Seto reference does not disclose an optical code.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jamara A. Franklin whose telephone number is 703-305-0128. The examiner can normally be reached on Monday through Friday 8:00am to 4:30pm.
